

The example apps presented in textbook (Deitel's "Android How to Program") are based on ADT bundle, but they can be easily migrated to Android Studio. In Chapter 2 of the textbook, detailed instructions are given for creating the "Welcome" app using ADT bundle. This document shows the steps to create the same app using Android Studio. You might find reading Chapter 2 still very helpful because it introduces some important concepts that are independent of IDEs.

If you didn't have a project opened, Android Studio shows the Welcome screen. To create a new project, click Start a new Android Studio Project.

If you had a project opened, Android Studio shows the development environment. To create a new project, click File > New Project.

Create New Project

 **New Project**
Android Studio

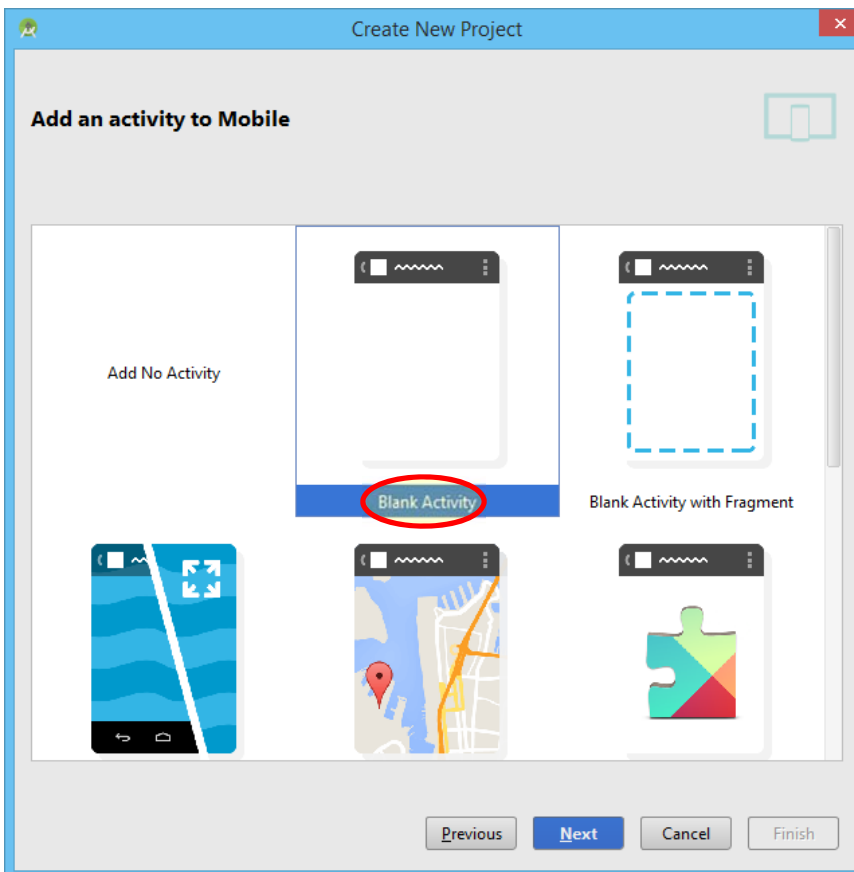

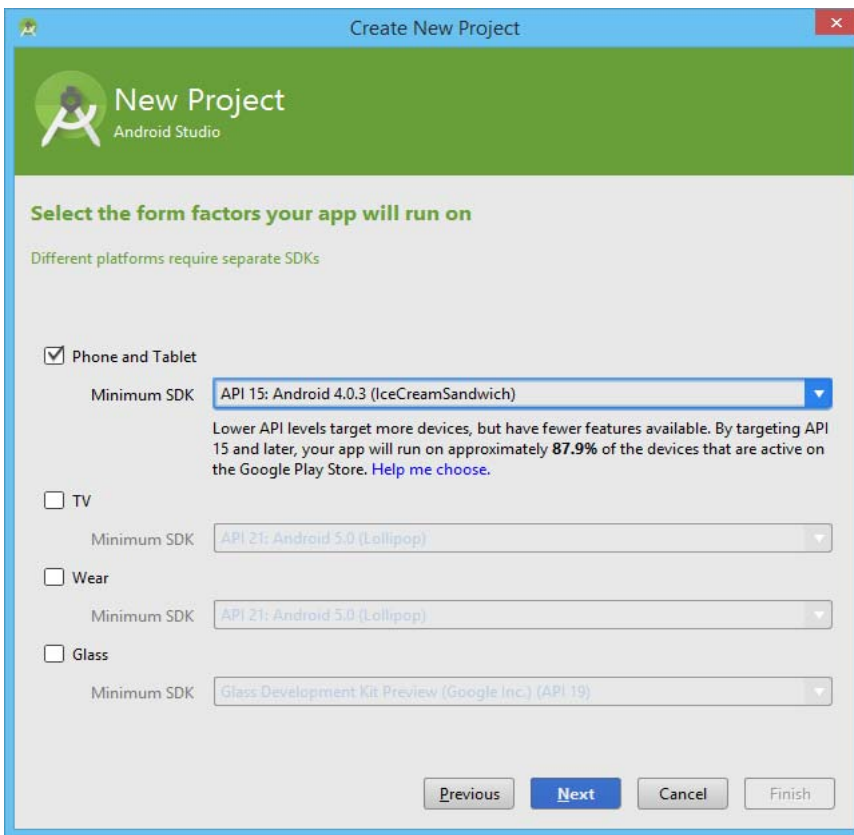

Configure your new project

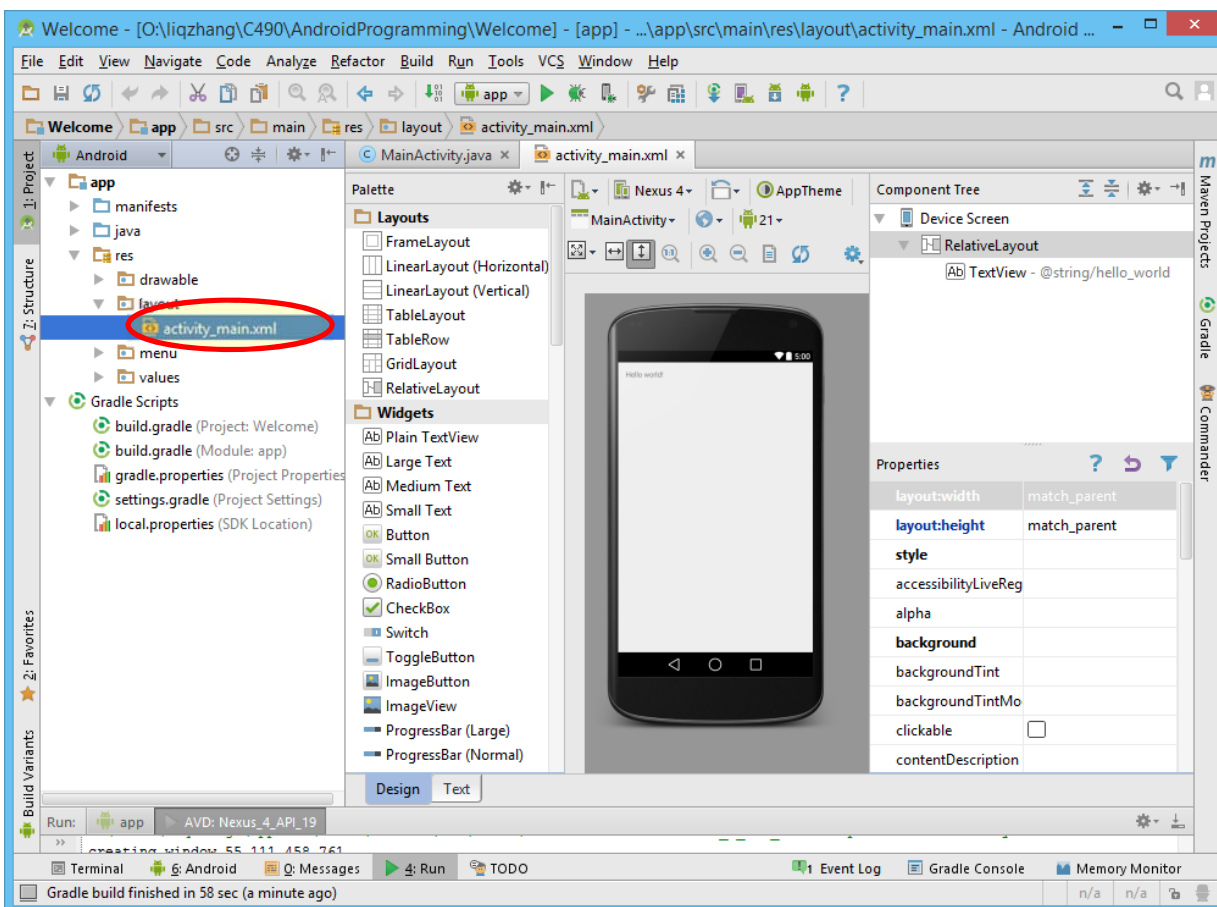

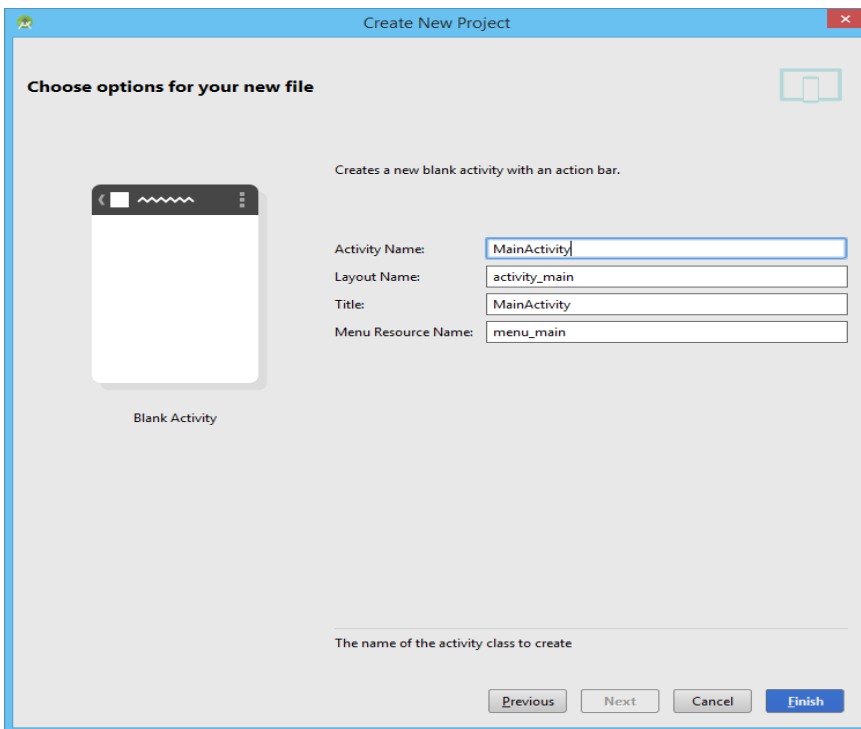

Application name:

Company Domain:

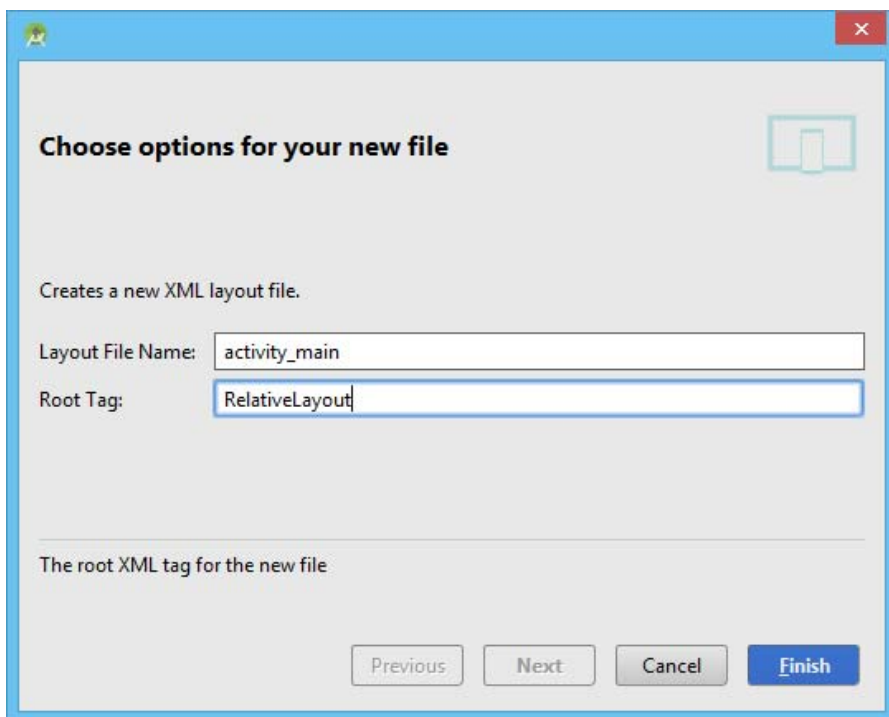

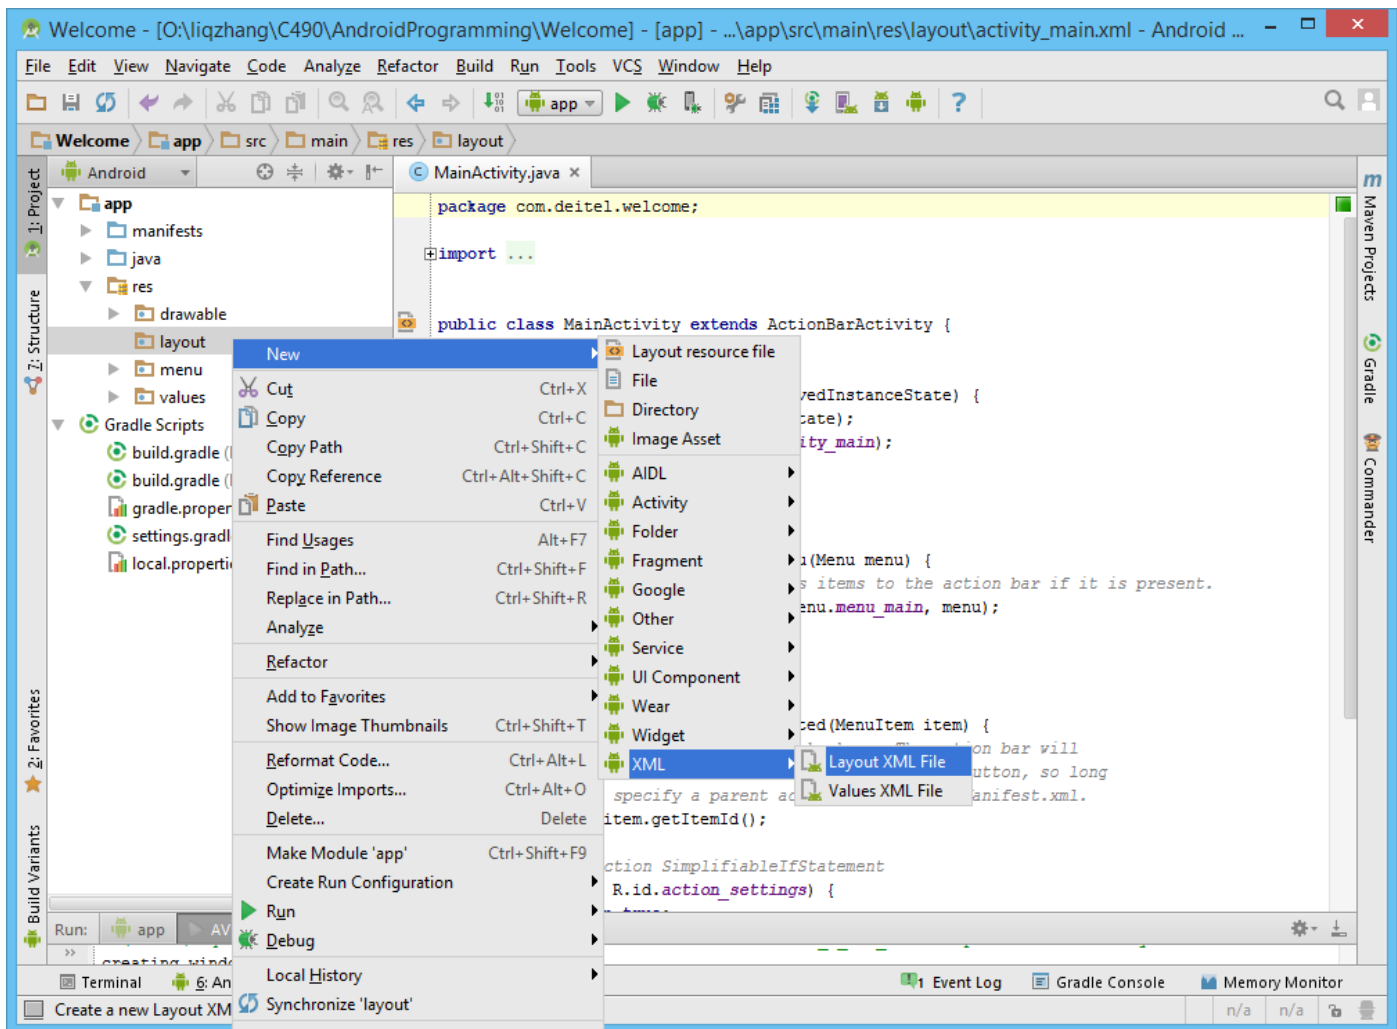

Package name: [Edit](#)

Project location:

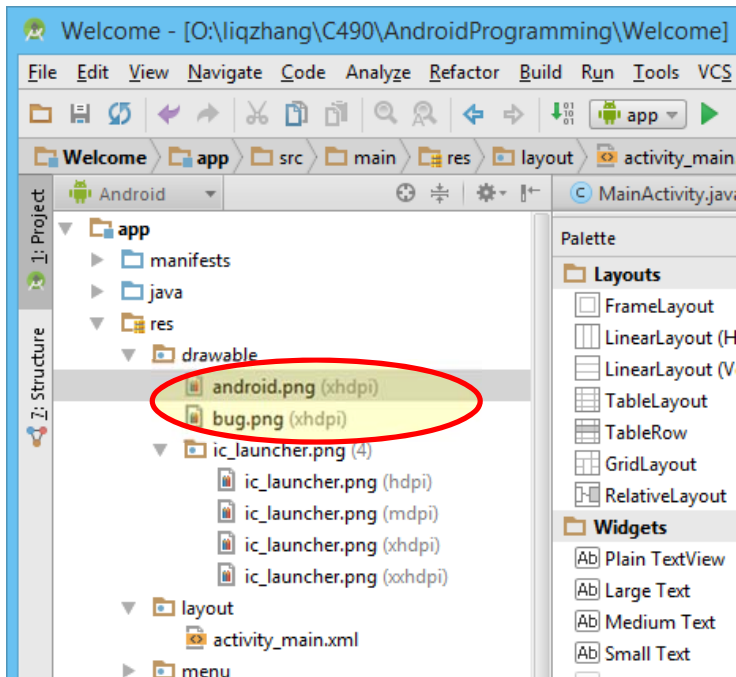

Delete the default **activity_main.xml** file (right-click the file → Delete), and create a **new** one (right-click “layout” → New → XML → Layout XML File).

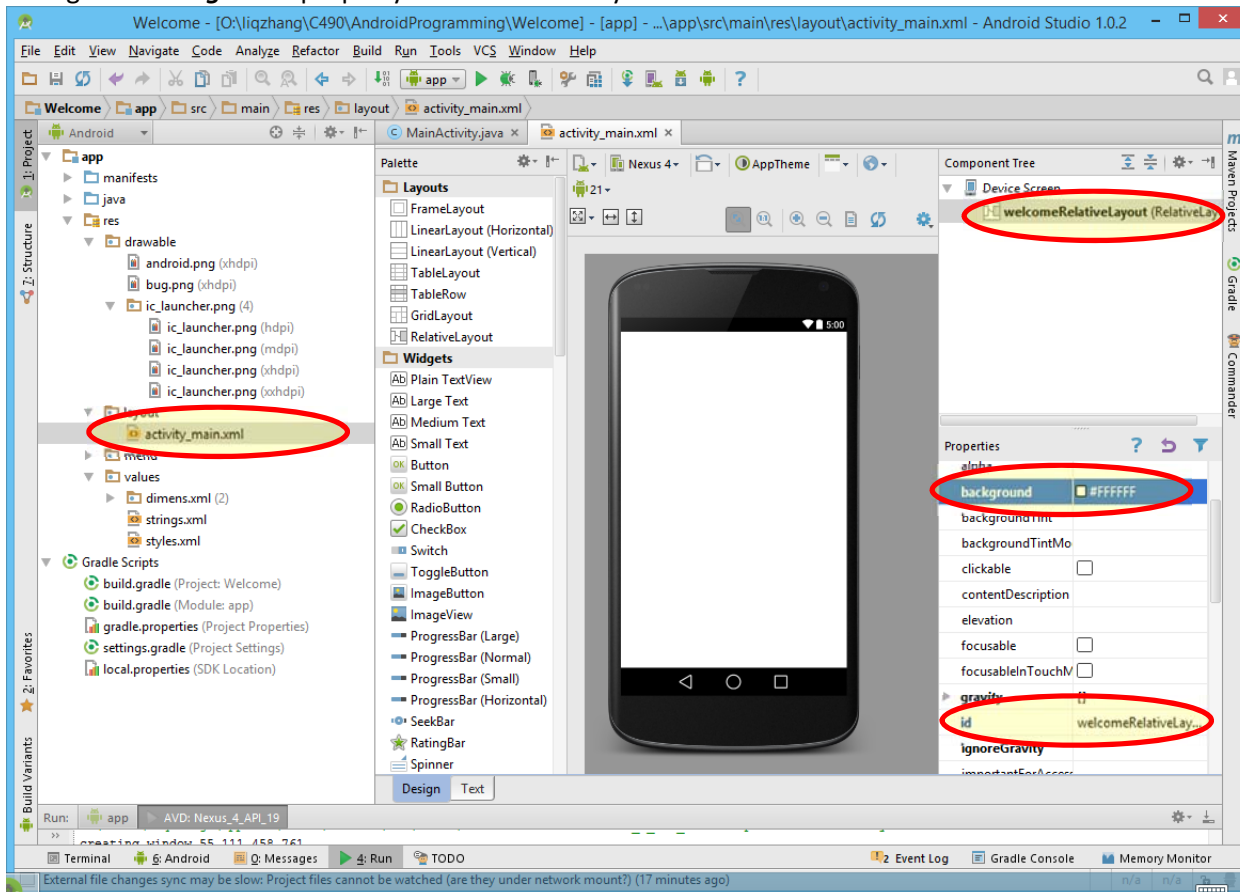

Adding images to the project (copy *bug.png* and *android.png* from “images” folder of book’s source code (read “Preface” of the textbook to find where to download the source code), paste it under the folder of “*drawable*” in the *Android* window)

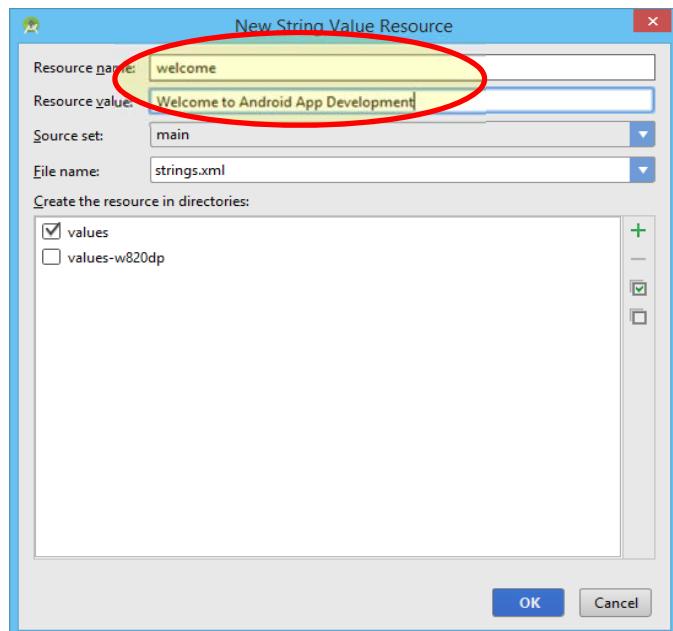

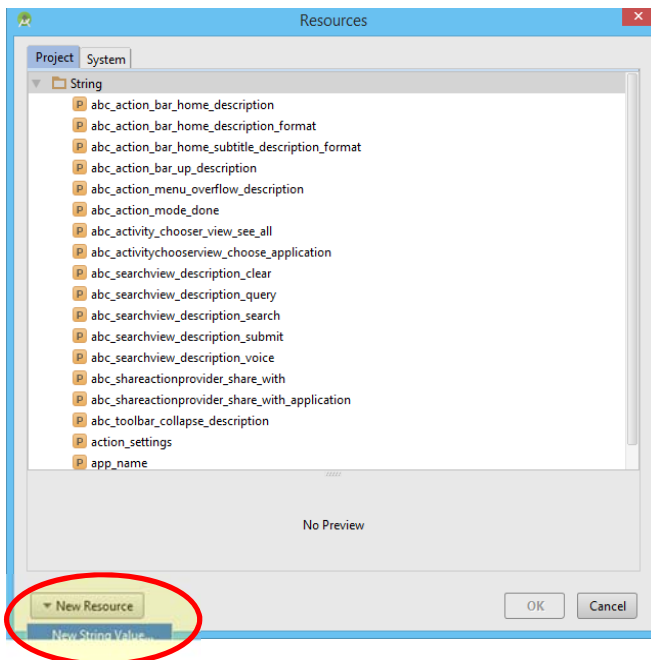

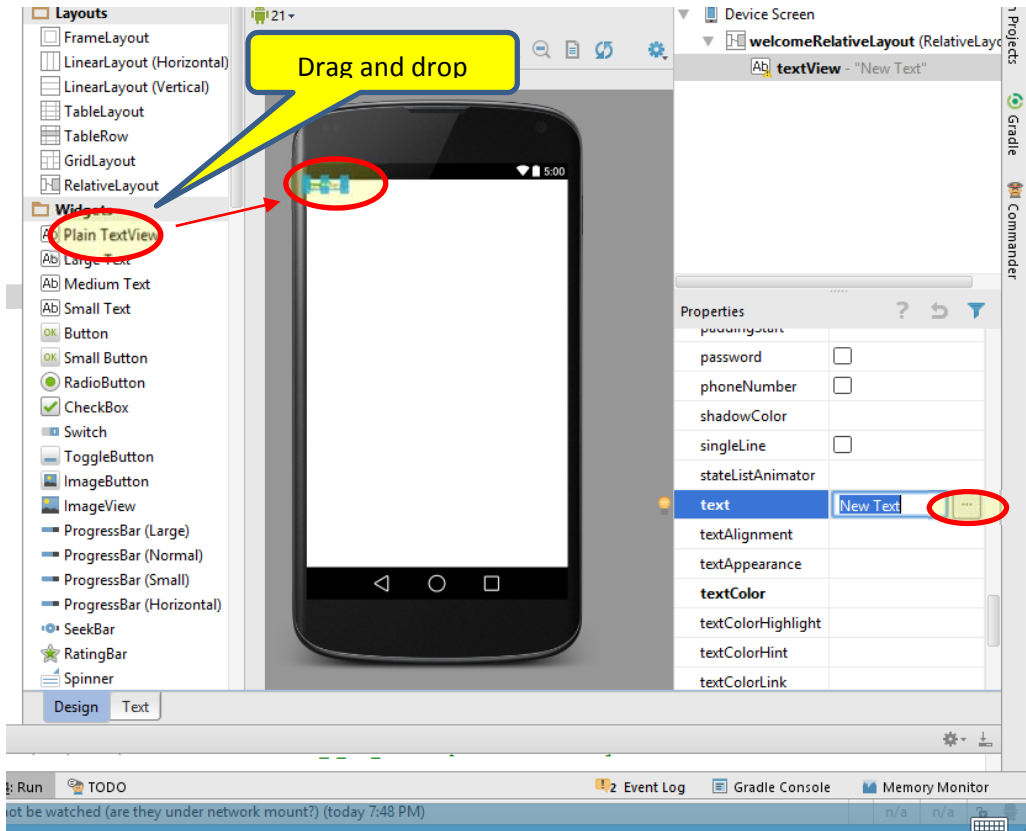

Change the *Id* property of the RelativeLayout → *@+id/welcomeRelativeLayout*

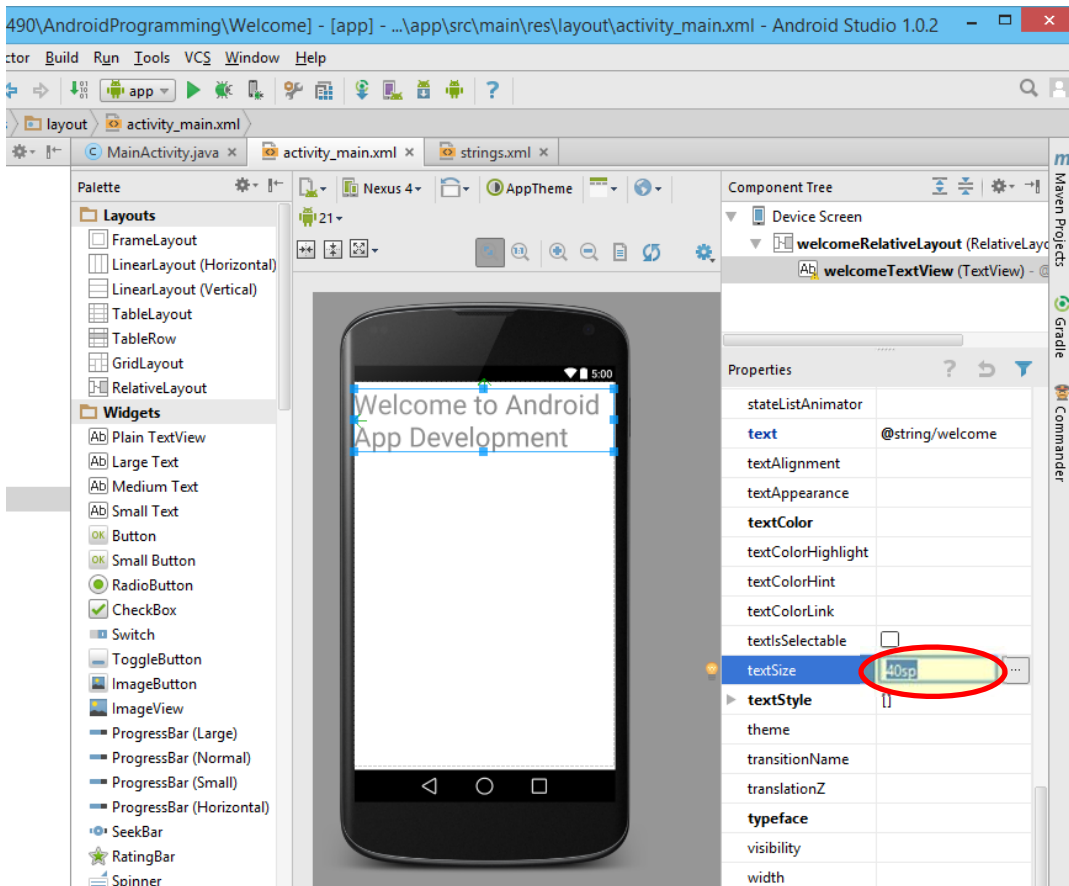

Change the *Background* property of the RelativeLayout → *#FFFFFF*

Add a new *TextView*.

Configuring the *TextView*'s Text Property using a *String Resource*

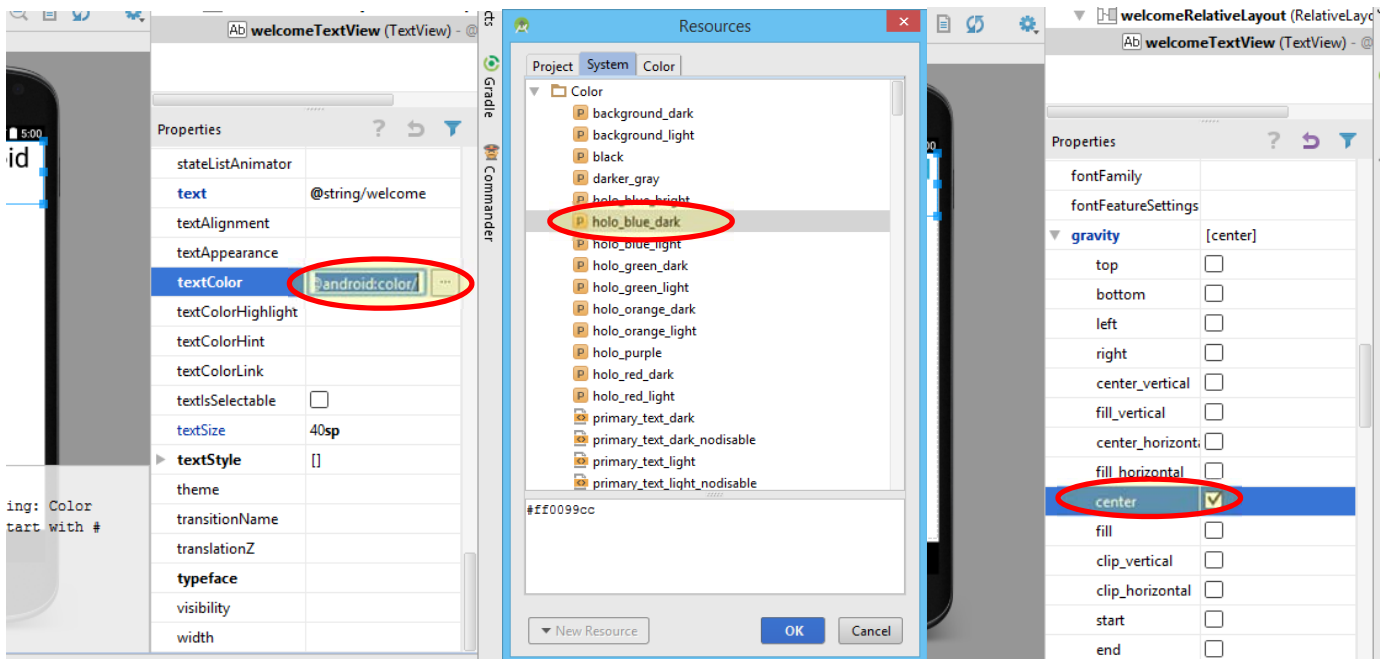

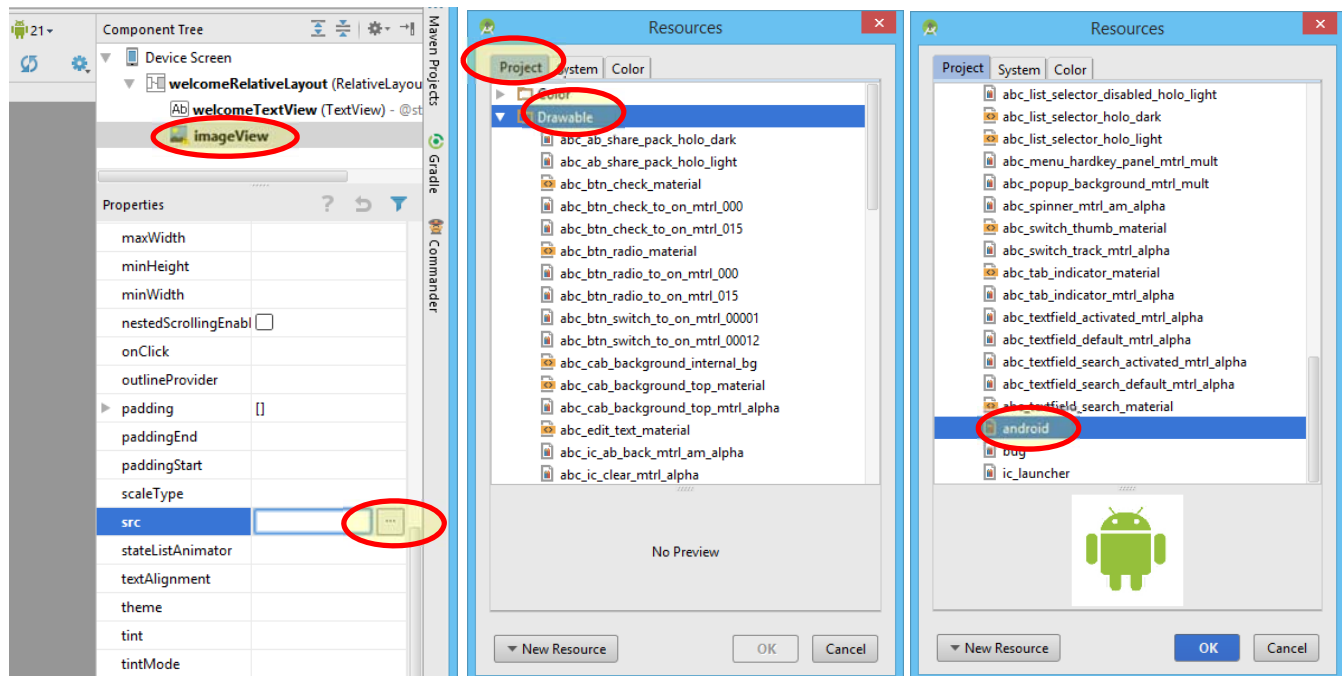

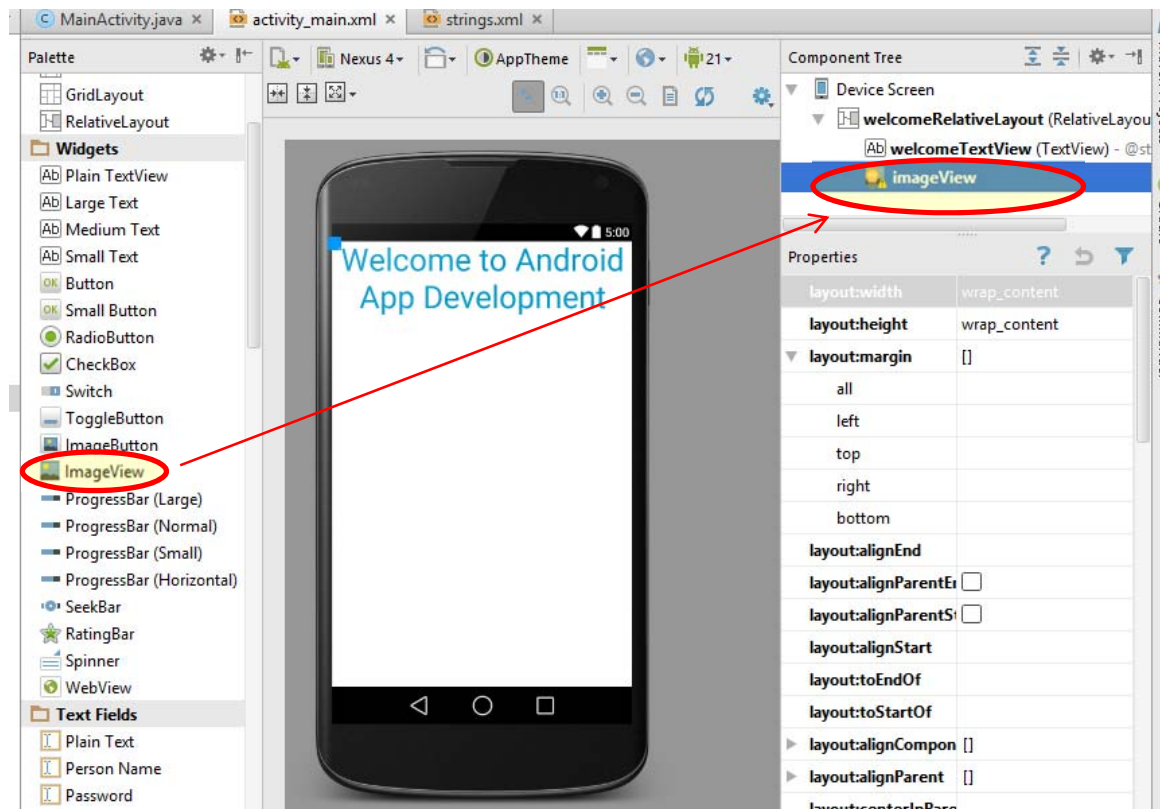

Continue to configure additional properties for the TextView (shown as below).

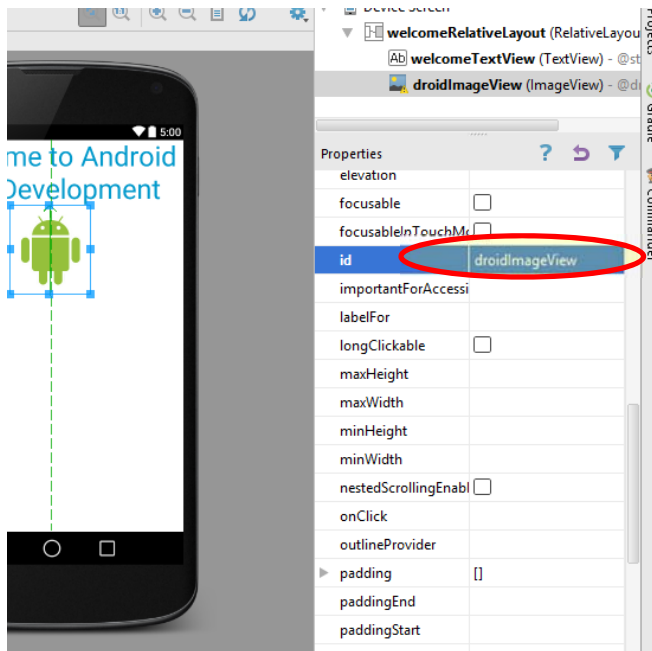

Sets its `textColor` property to: `@android:color/holo_blue_dark`.

To center the text in the TextView if it wraps to multiple lines, set its Gravity property to center.

Adding *ImageView* to display the Android Logo (drag “ImageView” and drop it into the *Component Tree* window as shown below).

In a similar way, add another ImageView to display the Deitel Bug Logo.
